**Function.** The function covered by this checklist is to determine frequency supportability modifications in the experimental phase (Frequency Supportability for Equipment or System Research and Development (R&D)). Information Mission Activities: Radio Frequency Spectrum Management.

**Purpose.** The purpose of this checklist is to assist Program/project/product managers, contracting officers, or commanders at all levels responsible for; coordination and integration of the research and development, test, acquisition, fielding, procurement, leasing, modification, installation, or operation of Army materiel requiring radio frequency spectrum support under AR 5-12. To plan for experimentation criteria upon which to validate or modify frequency supportability considerations originally identified in the planning phase. To insure frequency supportability requirements are included in all documentation used in experimentation with all devices, equipment, and systems that will transmit or receive RF energy. The controls listed provide reasonable assurance that Army resources are adequately safeguarded.

**Instructions.** Answers must be based on the actual testing of key management controls such as document analysis, direct observation, interviewing, sampling, and simulation. Answers that indicate deficiencies must be explained and corrective action must be identified in supporting documentation. This checklist must be used 120 days after publication and every two years thereafter. Certification that this evaluation has been conducted must be accomplished on the enclosed DA Form 11-2-R (Management Control Evaluation Certification Statement).
